

RSTARS 540 BATCH ERROR CORRECTIONS SCREEN

The following changes and/or modifications to RSTARS 540 Batch Error Corrections screen have been implemented to meet some business needs:

- Users who have access to 540 Batch Error Corrections screen could previously delete system generated batches by marking them for deletion. The implemented changes will now prevent users from deleting system generated batches and users will get an error message "716 INV BTYPE FOR DEL".
- Users who have access to 540 Batch Error Corrections screen could previously hold a released batch. The new changes now will not prevent users from holding a released batch and users will get an error message "BATCH HOLD AUTHORIZATION FAILURE".
- Users who have access to 540 Batch Error Corrections screen could previously receive a partially blank screen if they used the Clear Key (+) to end the active interrupt to 540 Batch Error Corrections screen. The problem has been fixed and users can link back and forth without any problems.
